

eWiSACWIS Release 2.5 Pre-Release TOP 15

TOP 15 eWiSACWIS Pre-Release 2.5 - Incidents and Enhancements

ID	Problem Area	Description
20656*	Activity Notes	The search link used to indicate the 'Worker Making Contact' is now available when a note has been saved but not finalized.
20639*	Activity Notes	Fixed Provider and Case Notes so that sort of narrative works in the following situations: <ul style="list-style-type: none"> - on the window (sometimes correction notes were out of order) - on the template for one note (sometimes correction notes were out of order) - on the template for print all notes (sometimes the correction came first and the correction notes were out of order)
20907*	Assessment	If an Initial assessment was created during release 2.3 with a Modified IA the supervisor will no longer receive a fatal application error when they approve the work.
20029*	Assessment	The Modified Initial Assessment option was removed from the Assessment page.
20589*	Assessment	Access page and Assessment page – New Shaken Baby Syndrome reference data and the mandatory completion requirement for the description field have been added.
20983*	Assessment	A completed checkbox was added to the IA-Secondary and IA-Narrative page so that the case disposition can be entered when it is appropriate to enter the information. Note: The completed checkbox will need to be selected before the Assessment can be approved.
20795*	CPS Reports	All historic PS Reports are now populated with their respective PS Report Narratives.
10542*	Desktop	A new checkbox called "View Not Approved/Cancelled" has been added to the desktop below the {Worker's Name}. The new checkbox can be checked and unchecked by the user. Changing the status/view will refresh the desktop. When the "View Not Approved/Cancelled" checkbox is not checked the system will hide all previously cancelled (checks) or Not Approved work (payments, forms, plans, etc.) and display only previously approved work (approved placement (both out and in-home), approved legal documentation, licenses), pending work (work associated with approvals, but lacking final approval), work in progress (work not associated with approval and which does not have a status, such as: adoption referral, ICPC Record, legal record) and work not associated with approval, but which has a pending/accepted/rejected status (checks with status OK or pending). Not Approved plan terminations will not be hidden. Not Approved case closures will not be hidden. Not approved Additional Licensing Actions will not be hidden. The unchecked "View Not Approved/Cancelled" is a default view.
20637*	Document Plans	Workers can now access and work on the Safety Assessment and Plan from the options drop down of the Family Assessment and Case Plan, the Case Progress Evaluation, and the IA Primary caregiver pages.
20343*	Home Inquiry	When a home inquiry is screened out, the system now links the screened out home inquiry with the associated provider.
20862*	Home Provider License	Adds two new templates to the system for both State Adoption workers and county workers to use when licensing a home. The current AFA has been removed from the system and in it's place will appear: 1) Child Specific Home Study Report 2) Multi-Purpose Home Study Report.

10218*	Issue/Reconcile Checks	Creates a whole new set of financial reports which are in Excel spreadsheet format. The report content mirrors the information found in the Pending Checks and Pre-Audit Payee reports, is sort able and in a single-line format. County staff that need to access these reports will need to request access to these reports from their security delegate. The report IDs are from FM0221 - FM0231.
20205*	Merge Person	Allow workers to identify when a merge is not appropriate so the question mark icon will no longer display on the case/provider maintenance page.
20428*	Mobile Computing	When case notes are in a pending status and checked out to eWiSACWIS Anywhere, the notes will be editable like they are online. Also, when case notes are checked in and not finalized, the notes will remain editable.
20570*	Templates	This enhancement develops a table-driven process that provides access to template mappings from the page they are launched from. A new banner button will be displayed only on pages that have templates. Clicking on the button will take the worker to the associated template mapping document. The mapping document will educate workers on template functionality. The documents will identify whether a field is prefilled, user entered, modifiable or not and if prefilled, where/how that information is entered.
